Accessories List

Upper slide rail*2 Lower slide rail*2

Locking frame *1 Connect 4-5 Supporting bar and Supporting bar *1

Handle *1 Locking decorative cover *2

M5*10mm hexagon socket screw *4 M5 gasket *4 M5 locking gasket *2 M5 nut *4 Self-tapping screw *2 M4 hex wrench *1 Anti-slip pad *4 Heavy-duty screw *2 Installation manual *1

03

Installation of lower slide rail

Remove the protective film on the bottom of the material.

Align the installation hole with the screw hole of the corresponding part of the material, align and screw with tools.

Slide the lower slide rail of the lower shelf to expose the screw hole, position it and align it with the screw hole of the material, and screw it with tools.

Use 4 ST4.2*19mm self-tapping screws to align with the pre-drilled holes and lock the slide rail.

Finish the installation of lower slide rail.

04

Installation of upper slide rail

Similarly, take the same tools of the top of the material.

Align the installation hole with the corresponding part of the material, align and screw with tools. A total of 8 M5 nuts.

Slide the outer rail of the upper slide to expose the screw hole, position it and align it with the screw hole of the material, and screw it with tools.

Use 4 ST4.2*19mm self-tapping screws to align with the pre-drilled holes and lock the upper slide.

Finish the installation of upper slide.

05

Installation of frame

Align the bottom holes of the shoe frame with the groove holes of the slide and fix the shoe frame with M5*10mm hexagon socket screws with M5 gaskets.

Use M5*10mm hexagon socket screws on the bottom, and the bottom of the main frame is fixed.

Adjust the adjustable screw on both sides of the shoe frame to make the shoe frame and the upper end of the frame on the hole position in the groove of the upper slide rail.

Use two M5*10mm hexagon socket screws with M5 gaskets to connect and fix the frame and the upper slide, and then tighten the screws.

Tighten the support end of the adjustable screw, and the frame is fixed.

06

Installation of the interlocking components

Connect the two shoe frames with the connecting rod.

Insert the M5*L locking washer into the hole of the connecting rod, and then use the M5 nut locking washer that is the connecting rod at the bottom of the main frame, and fix the bottom side with tools.

Same the other end and between connecting rod, fixed.

Insert the M5 locking washer into the upper linkage rod in the position, then insert the M5 locking washer into the top connection part, and fix it with a protective cap for a flat head screw.

The upper connecting rod has been installed, and the frame is stable. Finish.

07

Installation of the basket

Align the two ends of the basket with both sides of the frame and press down to insert it. Note that the side with the guard plate of the basket is aligned with the inner side.

Install the basket from bottom to top in sequence, and the basket is installed in the same way. Finally, install the 2 PCS anti-slip pads of three specifications. The basket installation is complete.

08

Installation of the handle

Align the hole the holes with the frame holes, and then use the M5*10mm screw to fix the handle. The handle installation is complete.

Finish the A series A-shaped rotating shoe rack installation.
